

# Enable attack protection on core switches

## Overview

Just like DHCP snooping, enable ARP inspection in the global configuration mode on the switch. Secondly, go to interface mode and configure those ports as trustworthy that are connected to the core devices, such as routers, firewalls, or servers. It encrypts management traffic, protecting login credentials and administrative commands from interception. Using SSH instead of Telnet ensures that all management sessions are encrypted, which is an. This document describes the Spanning Tree Protocol (STP) root guard feature that enhance switched network reliability and manageability. There are no specific requirements for this document. Sophos Switch can monitor and block denial-of-service (DoS) attacks. If too many MACs appear or an unexpected MAC is detected, the port goes into an err-disabled state, as shown in the.
