

# Grounding of anti-slide pile distribution box

## Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be  $< .$  Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. 26 mm<sup>2</sup> (10 AWG) ground wire must be used, and in all other markets a 6 mm<sup>2</sup> must be used. Following its application, various structures have been developed. One path is aimed at improving the. Anti-slide piles are structural elements inserted into stable strata below potential sliding surfaces to counteract landslide thrust through anchorage effects. Widely used in slope reinforcement, landslide stabilization, bridge abutments, and tunnel reinforcement projects, these piles offer. violation, and misinterpretation. The piles usually have a large ide piles, should meet several conditions. If the anti-slide pile intersects into the assessed slip surface, then for the calculation of the factor of safety is introducing passive (resisting) force P which corresponds to bearing capacity of pile Vu.
