

How to connect a network patch panel

110 patch panel

Overview

To wire a patch panel: Mount the panel in your rack, route cable runs to the back with service loops, strip 2-3 inches of jacket, match each wire to the T568B color code printed on the panel, seat the wires into the 110 IDC slots, and punch down with a 110 tool (blade). To wire a patch panel: Mount the panel in your rack, route cable runs to the back with service loops, strip 2-3 inches of jacket, match each wire to the T568B color code printed on the panel, seat the wires into the 110 IDC slots, and punch down with a 110 tool (blade). The complete process for terminating cable runs at a patch panel, from mounting and cable management to punch-down, labeling, and testing every port. Covers 110-style punch-down panels, keystone alternatives, and cable management best practices. To wire a patch panel: Mount the panel in your rack. To wire a patch panel, you will need patch cables, the patch panel, and a punch-down kit. The punch-down kit should include the following: That's the full list. If you have everything you need, you're ready to start wiring the panel. The forward-facing side of an RJ45 patch panel features a row of keystone ports that connect to switches, and the rear-facing side is equipped with IDC termination modules for connecting workstation cables.
