

How to connect the 10 Gigabit Ethernet cable to the fiber-to-electrical port module

Overview

A special 10G Copper RJ-45 Transceiver (10G-SFP-T) is required to connect the SFP+ port to RJ45. It allows connecting a server/storage side Cat6/7 cable to an SFP+ port transceiver. An SFP module (or optical transceiver) converts electrical signals from network devices (switches, routers) into optical signals for fiber transmission and vice versa. 1G/10G SFP+: Standard for Gigabit and 10 Gigabit Ethernet. These transceiver modules are hot-swappable input/output (I/O) devices that plug into 100BASE, 1000BASE and 10GBASE ports (for SFP+), which connect the module port with the fiber-optic or copper network. 4ft (30m) * using Cat6a/Cat7 or above cable for 10G connection in various applications. In this video, we'll guide you through building a high-speed 10G LAN by connecting two fiber switches. Finally, check the transmit (TX) and receive (RX) paths to ensure that signals are aligned.
