

How to ground a high-altitude distribution box

Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be $<$. Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. The purpose of a grounding system is to establish a low impedance path to earth. GROUNDING DESIGN THEORY. 150kV will most likely warrant a tower, with one or two lightning ground wires run with it. Depending on the physical construction of the circuit. I don't know of any neutral (4 wire) system. Since organizations and responsibilities can change, you should verify the currency of the information above using the ASSIST Online database at mil _____ DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.
