

# Requirements for Cable Trench and Cable Tray Installation

## Overview

This article provides a comprehensive framework that governs various aspects of cable tray installations, including the types of cables that are deemed acceptable for use, requirements for grounding and bonding, and stipulations regarding tray fill capacity. Additionally, it addresses critical. NEC Article 392 outlines the key rules for installing and maintaining industrial cable tray systems. These systems, made from metal or plastic, are open structures designed to support electrical conductors, ensuring proper organization and safety. This installation is for underground services from 2001 amps to 4000 amps. The following pages address the 2014 National Electrical Code® requirements for cable tray systems as well as design. Cable tray systems provide a safe, organized, and flexible method for supporting insulated conductors and cables in commercial and industrial electrical installations.
