

Serbian electrical cabinet wiring colors

Overview

BLACK: AC and DC main power chains; RED: AC control current chains; BLUE: DC control current chains; (dark blue) ORANGE: power chains that do not need to be separated according to 5. (wires that carry strange voltage and can remain live when the main switch of the cabinet . Colour identification by using common colours is permitted, provided that there is no risk of confusion and no GREEN or YELLOW is used, except in the two-colour combination GREEN-YELLOW. When using color codes for the identification of current conductors, it is recommended to use the following. ● Easy Identification: The colors immediately tell you the purpose of the wire. ● Simple Maintenance: Future repair or upgrade is easier and safer. ● Universal Standards: Enable electricians in various regions to learn about wiring systems within a short time. These codes help us to follow the safety rules. The colors and the labels can be observed below: From the list above we can conclude that: The UK now adapts IEC 60446 as its own wire color codes from British Standard BS.
