

# Service life of non-metallic cable trays

## Overview

**Check Cycle:** We suggest checking and looking after non-metal trays fully every 3 to 5 years. Fix or replace aged, cracked, or damaged coatings quickly. These trays carry important power and communication cables, and if they fail, things can get messy and unsafe. Understanding Cable Tray Service Life helps you plan, budget, and keep everything running smoothly. We think it's key to know what affects how long a cable tray does its job well. Here, we. Walk through any older chemical plant, fertilizer facility, or coastal power station in India and you will find the same story: GI or MS cable trays eaten through by rust, sagging under their own weight, and coated in layers of paint that have long since cracked and peeled. In many cases, these. Our corrosion-resistant Fiberglass Reinforced Plastic (FRP) cable trays solve these challenges with a modern approach to industrial cable management. Designed specifically for challenging environments where traditional materials fail—such as offshore platforms, chemical plants, and wastewater. Is your cable tray system optimized for safety, dependability, space and cost savings?

Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and. METAR Brand GRP (Glass Reinforced Plastic) Cable Trays are engineered to provide superior performance in cable management systems, especially in environments where corrosion resistance, electrical insulation, and lightweight construction are paramount.
