Since the Utility distributes power from a Three Phase Transformer, a prime requirement regarded by the Utility company is to make sure that the three phases of the transformers to be balanced in load distribution. Though a 100% balanced load cannot be achieved most of the time, a higher percentage. The three-phase distribution board is used to distribute power to the three-phase loads and circuits such as three-phase motors, three-phase machinery, three-phase to single-phase distribution boards, etc. Three-phase distribution boards are used in large factories, buildings, manufacturing units. A distribution board is the combination of protective devices such as Main switch, MCB, MCCB, RCD, RCBO, Isolator, Fuses and Switches etc. used to control and safely distribute the power supply to the electric appliances and devices. A distribution board is also known as main breaker box, electric. 3 phase DB box wiring is an essential component of electrical installations in commercial and industrial buildings.
