

What to do if the fiber optic patch cord is not long enough

Overview

2) The extra length of the fiber patch cord must be within 500mm. 4)The radius of curvature of each fiber jumper should. Accurate length fixing is a crucial aspect in planning, with the goal of ensuring efficient, safe, and future-proof implementation of fibre optic patch cords. Whether it's a data center, an upgraded telecom network, or designing FTTH systems, selecting the correct cable length ensures optimal. This cable is coming from the wall and plugs into a box which in turn plugs into my router! I need to make this cable longer so I can move the box under my house and bring it up elsewhere. Incorrect cable lengths can lead to signal attenuation, which refers to the loss of signal strength as it travels through the cable. What if the required length is not long enough by using one of these options, for example we need 800 meters in the field. If you need a smaller cable length please contact us and we can discuss the issue. Despite their essential role, fiber optic patch cords can encounter various problems that may compromise network performance.
