

What type of signal equipment is fiber optic cable

Overview

A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry light. A TOSLINK optical fiber cable with a clear jacket. These cables are used mainly for digital audio connections between devices. Each device in the chain plays a specific role. Network designers, installers, and maintenance teams all benefit from knowing what each component. Before diving into the tools used for installation and maintenance, it's vital to understand the core components that constitute a fiber optic network. These are the physical elements that carry the light signals, enabling high-speed data transmission. In this article, we will explore the key optical equipment needed for a fiber optic network, including the Optical Network Terminal. It transmits optical signals through fiber optic cables and converts them back into electrical signals at the receiving end.
